

Every frame. Every step. To court.

Kinesense LE is a powerful platform that enables fast retrieval, intelligent alerting & searching, and streamlined reporting across massive volumes of video, all while safeguarding the integrity of your intelligence and evidential material and reducing time and effort.

Detect people using a range of powerful algorithms that allow you to find people by attributes or appearance. Whilst built-in vehicle type and color detection with license plate recognition enables you to track vehicles in video.

The platform contains all the functions to enable you to go from the first frame to the final verdict.

Available on a modular basis, so you can add the functionality you need:

RECON

Real-time
observation
platform

Review

Post-event
video search
& analysis

Report

Video clarification,
redaction,
authentication for
court reports
