

Evidence Reporting & Video Clarification

With Kinesense Report, investigators can bookmark objects and events of interest to quickly compile viewing logs and intelligence reports for seamless sharing during team briefings. Sensitive information is protected through rapid redaction tools, allowing witnesses and objects to be obscured in seconds. A host of clarification and enhancement tools are also available to improve image and video quality, ensuring investigators can extract the clearest possible evidence.

Kinesense automatically records every action taken during a video investigation, generating disclosure reports that preserve the chain of evidence and support ISO 17025 compliance. Widely accepted by courts, Kinesense is recognised as an effective and trusted use of technology. Our searchable disclosure logs make it easy to locate exactly what you need, saving valuable time while ensuring full evidential integrity and regulatory compliance.
