

Video Search and Analysis

Kinesense Review lets you quickly import video from any source – CCTV, body-worn cameras, VMS systems, and more – and automatically detect key events using AI powered algorithms. This intuitive yet powerful platform enables fast retrieval, intelligent searching, and streamlined reporting across massive volumes of footage, all while safeguarding the integrity of your evidence and reducing time and effort.

With a wide range of AI algorithms trained on real world surveillance video and suitable for various use case scenarios, investigators can quickly identify and track person of interest and close cases faster.
